

These validated data are a snapshot at a given moment; further updates are always possible.

<u>Species:</u>	<i>Escherichia coli</i>
<u>Group:</u>	K12
<u>Strain designation:</u>	IM30B
<u>Accession number:</u>	LMBP 9583
<u>Deposit date:</u>	19/05/2015
<u>Depositor:</u>	Dr I. Monk ¹ ¹ Department of Microbiology and Immunology, Doherty Institute, University of Melbourne, Melbourne, Australia
<u>Other culture collection numbers:</u>	/
<u>Containment level:</u>	This strain has been assigned the containment level 'Class 1' following the European Directive 2009/41/EC on the contained use of genetically modified organisms, and its updates (see also the Belgian risk group classification).
<u>Medium:</u>	LB-Lennox
<u>Selection marker:</u>	/
<u>Cultivation temperature:</u>	37°C
<u>Original reference:</u>	Monk et al., MBio 6 (2015), e00308-15 [PMID: 26015493]
<u>Related reference:</u>	/
<u>Genotype:</u>	<i>mcrA</i> Δ (<i>mrr-hsdRMS-mcrBC</i>) ϕ 80 <i>lacZ</i> Δ M15 Δ <i>lacX74</i> <i>recA1</i> <i>araD139</i> Δ (<i>ara-leu</i>)7697 <i>galU galK rpsL endA1 nupG</i> Δ <i>dcm</i> Ω <i>Phelp-hsdMS</i> (CC30-2) Ω <i>PN25-hsdS</i> (CC30-1)
<u>Phenotype:</u>	Str ^R
<u>Properties:</u>	<p>This bacterial host strain was derived from <i>E. coli</i> K12 DH10B by deleting the <i>dcm</i> gene encoding cytosine methylation. Additionally, the <i>hsdMS</i> genes encoding methylase and specificity genes (from <i>Staphylococcus aureus</i> clonal complex 30 - MRSA252) were introduced onto the chromosome at neutral locations via recombineering.</p> <p>The strain can be transformed efficiently with large plasmids due to <i>deoR</i> (<i>nupG</i>) mutation.</p> <p>Plasmids isolated from this strain transform <i>S. aureus</i> clonal complex 30 - MRSA252 at high efficiency.</p>
<u>Restricted use:</u>	BCCM MTA

Culture recovery and preservation instructions

The enclosed culture has been grown overnight to saturation, confirming its viability. BCCM/GeneCorner advises to recover it immediately on receipt before use or storage.

Recovery: subculturing into liquid or solid medium according to the cultivation conditions above

Long-term preservation: lyophilisation
cryopreservation (at least at -80°C)
