bccm.belspo.be

DNA sequence-based identification

BCCM/MUCL OFFERS TO YOU...

- Accurate identification at species level
- DNA-sequencing as a standard method in fungal identification
- Comparison with taxonomic type or reference strains of reliable identity
- Determination of the internal transcribed spacers (ITS) 1 & 2, the D1/D2 of the large subunit (LSU) rRNA and other pertinent sequences as required

... IN PRACTICE

- Submit preferably living pure cultures with information on the substrate of isolation
- The report specifies
 - genus and species name
 - the sequenced genes
 - a brief statement of the substrates and/or habitats where the identified fungus is typically encountered based on the scientific literature
